

# 57 Chevy Car Dash Instruction

Remove stock dash and all the stock gauges until it is bare, similar to this one. Note the clamps that will hold the Billet Dash to your dash.

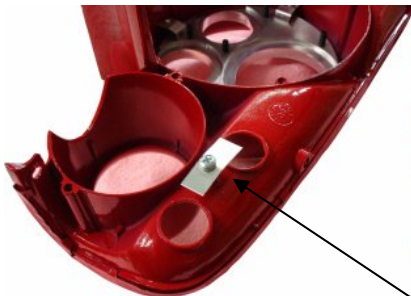

The only modification you need to make is to remove this screw hole. A die grinder with a cut off wheel works well.

The gauges are rear mount and will use the set screws with flat washer and nuts, to hold them to the panel.

Use these clamps for AutoMeter gauges.

These clamps will need to be bent to press against the LED holders.
